

100 Mount Street, North Sydney

Case Study

In addition to the two Diamond Series revolving doors to the main lobby entrance at 100 Mount Street, record C 127 automatic swing door operators were also installed to the two adjacent frameless glass swing doors.

With a concealed floor mounted design, these swing doors are fully automated, to ensure disabled access requirements are met, without detracting from the streamlined frameless glass appearance desired by the project architects, Architectus. The operators were installed with custom made stainless steel floor trims which sit flush with the floor surface and allows the flooring contractor to provide a removable stone inlay, necessary for servicing access, to match the surrounding floor finishes.

Freestanding stainless steel clad bollards on either side were installed for the mounting of necessary green mushroom head push buttons, for normal hours activation, card external reader, for after hours access, and an intercom system. The doors are secured via electromagnetic locks mounted to the transom member above with full height back to back D handles ensuring the doors can be operated manually in the event of a power failure.
